EDUCATION

Dr. D. Y. Patil Institute of Technology
Bachelor of Engineering in Computer Science

Aug. 2022 – May 2026
Pune, Maharashtra

Maharashtra Jr. College
Higher Secondary Certificate (HSC), Science

2020 – 2022
Ahmednagar, Maharashtra

WORK EXPERIENCE

Cognizant Technology Solutions
GenC Next Intern – AI/ML & Data Science

Feb. 2026 – May 2026
Pune, India

- Studied **end-to-end ETL and data warehouse pipeline design**, covering data collection and feature engineering stages, processing structured datasets of **100K+ rows** across 5+ pipeline configurations using Python and SQL
- Applied **6+ supervised and unsupervised machine learning algorithms** with advanced feature engineering, evaluating model performance through evaluation metrics to support **predictive modelling** workflows
- Practised **SQL query optimisation** techniques, reducing average query complexity by **40%** on sample datasets for data-driven analytics tasks

AI-NATIVE PROJECTS

Kai – Multi-Agent AI Investment Analysis System Python, FastAPI, React, Groq (Llama 3), Gemini ADK, PostgreSQL

- Architected a 4-agent LLM orchestration system (Coordinator, Fundamental, Sentiment, Valuation) with a structured debate loop to translate financial data into **data-driven investment insights** (Alpha Packet outputs) across 2 LLM providers
- Engineered agentic workflows integrating **3 live data sources** (Yahoo Finance, SEC EDGAR); built a full-stack FastAPI + React/Vite frontend with 5+ interactive Recharts dashboards to communicate findings to stakeholders

Loan Document Processor – RAG-Powered Lending Intelligence Python, Streamlit, Gemini API, RAG, OCR, SQL

- Designed a RAG pipeline using Gemini API and OCR to extract and process 5+ document types, **predict CIBIL scores**, and assess loan eligibility with structured AI outputs and prompt-engineered extraction templates
- Deployed a conversational LLM chatbot supporting natural language queries over ingested documents, reducing manual document review effort by an estimated **60%**

HTRL – AI-Powered Real-Time Traffic Accident Monitoring Python, YOLOv8, SQL, Vector DB, React

- Collaborated with team and built an AI-native monitoring system using YOLOv8 across 10+ simulated CCTV feeds, triggering automated dispatch to 3 emergency services with real-time tracking via a React dashboard
- Implemented **confidence-threshold classification logic**, achieving **<5% false-positive rate** and full auditability of all dispatched alerts via a SQL event store

SKILLS

Languages : Python, Java, JavaScript/TypeScript, C++, SQL, Bash

Frameworks : React, FastAPI, Spring Boot, Node.js, Express.js, Streamlit

Data Science & ML : Predictive Modelling, Feature Engineering, Model Evaluation Metrics, Supervised & Unsupervised ML Algorithms, RAG Pipelines, Prompt Engineering, YOLOv8, Gemini API, Groq

Data & Databases : SQL Query Optimisation, ETL & Data Warehousing, MySQL, PostgreSQL, MongoDB, SQLite, Vector DB

Tools : Git, Docker, REST APIs, WebSockets, Postman, CI/CD (familiar)

CERTIFICATIONS

Database Management Systems (DBMS) – NPTEL, IIT Certification

2024

Machine Learning, Feature Engineering, SQL Advanced, Python, ETL & Data Warehousing – Udemy Professional Certificates

2024 – 2025
