EDUCATION

Dr. D. Y. Patil Institute of Technology <i>Bachelor of Engineering in Computer Science</i>	Aug. 2022 – May 2026 Pune, Maharashtra
Maharashtra Jr. College <i>Higher Secondary Certificate (HSC), Science</i>	2020 – 2022 Ahmednagar, Maharashtra

WORK EXPERIENCE

Cognizant Technology Solutions <i>GenC Next Intern – AI/ML & Data Science</i>	Feb. 2026 – May 2026 Pune, India
- Studied end-to-end ETL and data warehouse pipeline design, processing structured datasets of 100K+ rows across 5+ pipeline configurations using Python and SQL - Applied 6+ supervised and unsupervised machine learning algorithms with feature engineering, gaining hands-on experience with data structures and model evaluation workflows - Practised SQL query optimisation techniques, reducing average query complexity by 40% on sample datasets	

PROJECTS

Shelf – Full-Stack Personal Digital Library Platform	Spring Boot, React, MySQL, MongoDB, MinIO, Docker, JWT
- Built a full-stack web app with a Spring Boot 3 REST API backend (Spring Data JPA + MongoDB) and a React (Vite) frontend for uploading, storing, and reading digital books (PDF/EPUB) online - Designed JWT-based authentication with Spring Security; integrated MinIO (S3-compatible storage) with MySQL and MongoDB for relational and NoSQL metadata, and containerized backend services with Docker - Built end-to-end using AI-assisted development tools (Cursor, GitHub Copilot, Claude) across both backend and frontend code	
Kai – Multi-Agent AI Investment Analysis System	Python, FastAPI, React, Groq (Llama 3), Gemini ADK, PostgreSQL
- Architected a 4-agent LLM orchestration system (Coordinator, Fundamental, Sentiment, Valuation) with a structured debate loop, producing outputs across 2 LLM providers - Engineered agentic workflows with REST API integrations across 3 live data sources (Yahoo Finance, SEC EDGAR); built a full-stack FastAPI + React/Vite frontend with 5+ interactive Recharts dashboards, developed with the help of AI-assisted coding tools (Cursor, Copilot)	
HTRL – AI-Powered Real-Time Traffic Accident Monitoring	Python, YOLOv8, SQL, Vector DB, React
Built an AI-native monitoring system using YOLOv8 across 10+ simulated CCTV feeds with confidence-threshold classification logic (<5% false-positive rate), triggering automated dispatch to 3 emergency services via a React dashboard with full SQL-based audit logging	

SKILLS

Languages : Python, Java, JavaScript/TypeScript, C++, SQL, Bash
Backend & APIs : Spring Boot, Spring Data JPA, Spring Security, FastAPI, Node.js, Express.js, REST API Development
Frontend : React, Vite, React Router, Axios
Databases : MySQL, PostgreSQL, MongoDB, SQLite, SQL & NoSQL Data Modelling
Cloud & DevOps : Google Cloud Platform (IAM, Hosting), Docker, Git, CI/CD (familiar)
AI-Assisted Dev : Cursor, GitHub Copilot, Claude, LLM APIs (Gemini, Groq)
Tools : Postman, WebSockets, JWT, MinIO (S3-compatible storage)

CERTIFICATIONS

Database Management Systems (DBMS) – NPTEL, IIT Certification	2024
Machine Learning, Feature Engineering, SQL Advanced, Python, ETL & Data Warehousing – Udemy Professional Certificates	2024 – 2025
